- 1 -
ABOUT THIS MANUAL

Organisation of the manual and available emulations.

1.1 - ORGANISATION

This manual provides detailed information on AX3000 terminal and its features. This manual has three chapters:

- **terminal commands**: an exhaustive list of escapes sequences supported by the AX3000 emulations,
- **character sets**: description of character sets,
- **keyboards**: description of available national keyboards, list of the default values for programming keys corresponding to the selected emulation and information about dead keys.

1.2 - AVAILABLE EMULATIONS ACCORDING TO THE MODEL

Several emulations are provided by the AX3000. The available emulations depend on the AX3000 model (serial or Ethernet TCP/IP).

Further more, emulations are grouped by family. These emulation families are used in the following chapters.

The following table lists the available emulations (sorted by family) according to the AX3000 models:

Emulation Families	Emulations	AX3000 Models	
		Serial	TCP/IP
ANSI	ANSI	yes	yes
	XENIX SCO	yes	yes
	UNIX SCO 3.2.2	yes	yes
	UNIX SCO 3.2.4	yes	yes
	SCO OPENSERVEN	yes	yes
	ANSI DOS	yes	yes
	UNIX SVR4	yes	yes
	ANSI INTERACTIVE	yes	yes
	ANSI RS6000	yes	yes
	ANSI MOS	yes	yes
	ANSI DATA GENERAL	---	yes
	ANSI SLNET	---	yes *
	UNIXWARE 7	---	yes
LINUX	---	yes	
VT	VT220	yes	yes
	HFT	yes	yes
	VT AS400	---	yes
WYSE	WYSE 60	yes *	yes *
PCTERM	PCTERM	yes	yes *
	PCTERM THEOS	yes	yes *
	OS2 POLYMOD2	yes	yes *
SM94xx	SM9400 et SM9412	yes *	yes *
TVI	TVI	---	yes *
QVT	QVT119+	---	yes *

Prologue	PROLOGUE 2/3, PROLOGUE 4/5	yes	---
	TWIN SERVER	yes	yes *

(*) optional

1.3 - FIRMWARE REVISION

The AX3000 firmware revision is composed by:

- an hardware information
- a firmware information

1.3.1 - Hardware Information

The AX3000 hardware information is:

FKx-BVyyy

- **FKx** is the electronic board code
- **BVyyy** is the boot code version (the boot code is the non-erasable part of the flash memory)

Examples:

FK3-BV11f
FK5-BV12a

1.3.2 - Firmware Information

a) General Information

The beginning of the firmware version is:

FCT.NA.aassi

- **FCT** is the AX3000 operating mode:
 - TCP stands for both TCP/IP and serial modes,
 - SER stands for serial mode.
- **NA** is the firmware nationality (code is ISO compliant). The main nationalities are:
 - FR: France - XX: International
 - GR: Greece - TR: Turkey
 - FI: Finland - PT: Portugal
- **aassi** is the year and the week number of the firmware creation following by an alphabetical index (for instance: 9832f).

Note: Three parameters depend on the firmware nationality:

- the set-up message nationality (FR: French messages, other: English messages),
- the possible presence of a national keyboard and associated character set. For instance, the Turkish environment (keyboards and character set) is only available with the 'TR' firmware.
- the default keyboard nationality (FR: France, XX: North American, TR: Turkey, etc).

b) Possible Firmware Options

If no option are included, the general firmware information is followed by ':STD'. Else, options, encoded by 3 characters, follow the general firmware information. A '&' is used as a separator.

The main firmware options are:

WYS : Wyse 60/120 emulation	ATO : ATO300 emulation
SM9 : SM9400/SM9412 emulation	THE : Theos emulation
QVT : QVT 119+ emulation	TVI : TVI 910 emulation
SLN : SLNET emulation	I51 : 3151 emulation
ALG : alpha-graphics mode	EUR : Euro currency symbol
F24 : 24-fctn-keys keyboard (AS/400)	MSE : mouse support

Note: some options are incompatible (ex.: WYS and I51).

Examples:

```
FK3-BV11f/TCP.FR.9832f:STD
FK5-BV12a/TCP.XX.9832f:WYS&EUR
```

**- 2 -
TERMINAL COMMANDS**

This chapter describes supported terminal commands for each emulation.

A terminal command is a character string. Terminal commands perform special actions (moving the cursor, setting reverse mode, etc). Generally such a sequence contains only 1 unprintable ASCII character (smaller than 20h). All other characters are printable (greater than 20h).

Conventions:

- **xxh**: xx is the hexadecimal ASCII character (ex: 1Bh is 27 decimal),
- **Esc** is 1Bh,
- **CSI** is the both ASCII characters 'Esc [' (1Bh and 5Bh).

2.1 - ANSI FAMILY

Note: for the 4 SCO emulations and the LINUX emulation, CSI can also be obtained by the 9Bh ASCII character (instead of the Esc [ASCII characters).

Controlling the Cursor

Cursor right Pn columns	CSI Pn C (or CSI Pn a)
Cursor left	08h
Cursor left Pn columns	CSI Pn D
Cursor up	Esc M
Cursor up Pn lines	CSI Pn A
Cursor up Pn lines and to column 1	CSI Pn F
Cursor down	Esc D (or 0Ah)
Cursor down Pn lines	CSI Pn B (or CSI Pn e)
Cursor down Pn lines and to column 1	CSI Pn E
Cursor to column Pn	CSI Pn G (or CSI Pn `)
Cursor to line Pn	CSI Pn d

Cursor to line Pn1 (1..25) column Pn2 (1..132)	CSI Pn1;Pn2 H (or CSI Pn1;Pn2 f)
Cursor to start of line (or to start of next line)	0Dh
Save cursor position	CSI s (or Esc 7)
Restore cursor to saved position	CSI u (or Esc 8)
Disable cursor	CSI < 0 @
Enable cursor	CSI < 1 @
Controlling the Terminal	
Sound bell	07h
Set scrolling region (beginning line number, ending line number)	CSI Pn1;Pn2 r
Terminal mode on	CSI Ps;...Ps h
Ps = 2: lock keyboard	
Ps = 4: insert character mode	
Ps = 20: new line (LF=CR+LF)	
Ps = 32: lock keyboard and send ACK (06h)	
Ps = 33: autoscrolling mode on	
Ps = ?3: set 132-column display	
Ps = ?6: origin is scrolling region	
Ps = ?7: autowrap mode on	
Terminal mode off	CSI Ps;...Ps l*
Ps = 2: unlock keyboard	
Ps = 4: replace character mode	
Ps = 20: line feed	
Ps = 33: autoscrolling mode off	
Ps = ?3: set 80-column display	
Ps = ?6: origin is screen	
Ps = ?7: autowrap mode off	
PC-scancode mode	CSI < 0 A
ASCII mode	CSI < 1 A
Display 24 data lines + 1 message line	CSI < 0 l**
Display 25 data lines	CSI < 1 l
Enable main screen (24 lines)	CSI < 0 E
Enable message line (25 th . line)	CSI < 1 E
Disable colouring feature	CSI < 0 G
Enable colouring feature	CSI < 1 G

* The last character in this sequence is a lowercase l

** The last character in this sequence and in the next sequence is an uppercase i

Set colours and enable colouring mode (4 pairs)	CSI < 2;Cn1;...;Cn8 G	
Set a VGA palette colour	CSI < 3;Cn;Pn G	
Enable private enhanced AXEL ANSI sequence mode	CSI < 0 B	
Disable private enhanced AXEL ANSI sequence mode	CSI < 1 B	
Save current setting and set UNIX SCO 3.2.2 personality	CSI < 0 H	
Restore saved setting	CSI < 1 H	
Active la vue Pn	CSI Pn z	
Enable monitor mode	Esc U	
Disable monitor mode	Esc X	
Miscellaneous actions	CSI = Pn L	
Pn=0: a cleared area (CSI Pn J, CSI Pn K or scroll) is filled with the current video attribute		
Pn=1: a cleared area (CSI Pn J, CSI Pn K or scroll) is filled with the normal video attribute		
Pn=2: the CSI Pn g sequence is equal to CSI = Pn g (see Editing section)		
Pn=3: the CSI Pn g sequence is behavior is defined in the Editing section		
Change page (only if '4 views, 2 pages' is selected through the set-up)	CSI < Ps1;Ps2 L	
Ps1 = 0: regular page changing	Ps2 = 0: enable next page	
Ps1 = 1: copy current page to wanted page before swap	Ps2 = 1: enable page number 1	
Ps1 = 2: clear wanted page before swap	Ps2 = 2: enable page number 2	
Turn keyboard LEDs on or off	CSI < Pn1;Pn2;Pn3 O	
Pn1 is the state of NUM LED, Pn2 is the state of CAPS LED and Pn3 is the state of SCROLL LED.		
The Pn parameter values should be:		
Pn = 0: the state of the LED (on or off) is not modified		
Pn = 1: turn the LED on		
Pn = 2: turn the LED off		
Mouse feature (if set through the set-up)	CSI < Pn M*	
Pn = 0: disable mouse	Pn = 1: local mode	Pn = 2: raw mode
Axel bitmap graphics functions	CSI < Ps;...Ps K**	
Font downloading (if set through the set-up)	CSI < Ps;...Ps N 	
Double-size characters (if set through the set-up)	CSI < Pn Q term mess term	
Pn = 1: double height	Pn = 2: double width	Pn = 3: double height / double width
term: message terminator	message: character string displayed in double size	

* For more information, refer the concerned literature

** For more information, refer the concerned literature

Controlling Character Attributes

Definition	CSI Ps;...Ps m
Ps = 0: all attributes off	
Ps = 1: bold	
Ps = 4: underline (only monochrome VGA monitor)	
Ps = 5: blinking	
Ps = 7: reverse video	
Ps = 8: blank	
Ps = 10: selects the primary font	
Ps = 11: selects the first alternate font; lets ASCII characters less than 32 be displayed as ROM characters	
Ps = 12: selects a second alternate font; toggles high bit of extended ASCII code before displaying as ROM characters	
Ps = 22: bold off	
Ps = 24: blinking off	
Ps = 25: underline off	
Ps = 27: reverse video off	
Ps = 3x: set foreground colour to colour x (x from 0 to 7)	
0: black 1: red 2: green 3: brown*	
4: blue 5: magenta 6: cyan 7: white	
Ps = 38: enable underline option	
Ps = 39: disable underline option	
Ps = 4x: set background colour to colour x (x from 0 to 7)	
0: black 1: red 2: green 3: brown	
4: blue 5: magenta 6: cyan 7: white	

Editing

Set tab stop at cursor position	Esc H
Move cursor to next tab stop	09h
Move cursor backward Pn tab stops	CSI Pn Z
Clear tab stop at cursor position	CSI 0g
Clear all tab stops	CSI 3g
Display ASCII character Pn	CSI =Pn g
Insert Pn null characters beginning at cursor position	CSI Pn @
Insert Pn lines of null characters beginning at cursor line	CSI Pn L
Display Pn times, the last displayed character	CSI Pn b

* Yellow for ANSI RS6000 emulation

Erase display:

from cursor to end of screen	CSI 0 J
from beginning of screen to cursor	CSI 1 J
entire screen	CSI 2 J

Erase line:

from cursor to end of line	CSI 0 K
from start of line to cursor	CSI 1 K
entire line	CSI 2 K

Delete Pn characters beginning at cursor position CSI Pn P

Delete Pn lines beginning at cursor line CSI Pn M

Erase Pn character beginning at cursor column CSI Pn X

Printing Control Sequences

Select the default printer port: CSI < Po F

TCP/IP models:	Po = 1: AUX1	Po = 2: AUX2	Po = 3: parallel
Serial models:	Po = 1: AUX1	Po = 2: parallel	

Using default port (serial or parallel): CSI Pn i

Pn = 0: Print screen Pn = 5: Enable local printing mode Pn = 4: Disable local printing mode

Enable Po auxiliary port for sending only (disable: CSI 4i) CSI < 5; Po C

Enable receive mode of Po auxiliary port (AUX1 or AUX2) CSI < 5; Po D

Disable receive mode of Po auxiliary port (AUX1 or AUX2) CSI < 4; Po D

TCP/IP models:	Po = 0: default port	Po = 1: AUX1	Po = 2: AUX2	Po = 3: parallel
Serial models:	Po = 0: default port	Po = 1: AUX1	Po = 2: parallel	

Programming Function KeysANSI mode: Esc Q Code Terminator Message Terminator

- Code: function key (<F1> = 0 (30h) ... <F61> = l (6Ch))
- Terminator: one character (>20h)
- Message: key definition (any character except Terminator). Character '^' (5Eh) indicates 20h must be subtracted from the next character.

Example: **ESC Q 0 amenu^a**, <F1> sends **menu <RC>**AXEL mode: CSI < Code P Terminator Message Terminator

- Code: function key (refer to appendix A.3 or see the AX3000 set-up)
- Terminator: one character (>20h)
- Message: key definition (any character except Terminator). Character '^' (5Eh) indicates 20h must be subtracted from the next character.

Example: **CSI < 1 P amenu^a**, <F1> sends **menu <RC>**

Additional Screen Attributes Sequences (except ANSI DOS)

Set overscan colour to colour Cn (64 colours are available)	CSI = Cn A
VGA mode 'blink' (8 background colours)	CSI = D
VGA mode 'bold' (16 background colours)	CSI = E
Set normal foreground colour to Cn	CSI = Cn F*
Set normal background colour to Cn	CSI = Cn G
Set normal foreground colour to Cn1 and background colour to Cn2	CSI 2;Cn1;Cn2 m
Set reverse foreground colour to Cn	CSI = Cn H
Set reverse background colour to Cn	CSI = Cn I
Set reverse foreground colour to Cn1 and background colour to Cn2	CSI 7;Cn1;Cn2 m
Set graphic foreground colour to Cn	CSI = Cn J
Set graphic background colour to Cn	CSI = Cn K
For XENIX personality only: VGA mode 'bold' (16 background colours)	CSI 3;0 m
For XENIX personality only: VGA mode 'blink' (8 background colours)	CSI 3;1 m
Set cursor size (P1 upper microline, P2 lower microline)	CSI = P1;P2 C
Save current colour setting	CSI = Y
Restore saved colour setting	CSI = Z

Reports

AX3000 IP address	CSI < a (or CSI < 0 a)
Response: IP address <CR>	
Firmware revision	CSI < 1 a
Response: version <CR>	
Answerback message (set through the AX3000 Set-Up)	CSI < 4 a
Response: message	
Current session number	CSI < 5 a
Response: number <CR>	
Printer Status	CSI < 6 a
Response: OK <CR> or ERR <CR>	

TCP/IP Status Line (set the associated label)

Syntax is: CSI < c Terminator Message Terminator

- Terminator: one character (>20h)
- Message: session label.

Example: **CSI <czview 1z**

* In this sequence and in the next 7 sequences, Cn value is in range 0 to 15

Private Enhanced AXEL ANSI Sequence Mode

The following sequences, derived from native personalities, may be used to speed up the display on a Platine terminal. These sequences are shorter than their equivalent ANSI sequences.

Description	Sequence	Equivalent ANSI Seq.
Cursor up	05h	CSI B
Cursor right	06h	CSI C
Cursor left	08h	CSI D
Cursor down	0Bh	CSI A
Clear screen	0Eh	CSI H CSI 2J
Cursor to line 1 column 1	1Eh	CSI H
Insert a null character	Esc @	CSI @
Erase display from cursor to end of screen	Esc J	CSI J
Erase line from cursor to end of line	Esc K	CSI K
Insert a line of null characters	Esc L	CSI L
Delete current line	Esc M	CSI M
Delete 1 character	Esc P	CSI P
Start local printing mode	Esc '	CSI 5i
Stop local printing mode	Esc ²²	CSI 4i
All attributes off	Esc a	CSI 0m
Reverse video	Esc b	CSI 7m
Blinking	Esc c	CSI 5m
Underline	Esc d	CSI 4m
Cursor to line L and column C	Esc f L C	CSI L+33;C+33 H
Bold	Esc h	CSI 1m
Default attribute	Esc p	CSI 7m
Enable cursor	Esc v	CSI <1@
Disable cursor	Esc w	CSI <0@
Black foreground	Esc r 0	CSI 22;30m
Red foreground	Esc r 1	CSI 22;31m
Green foreground	Esc r 2	CSI 22;32m
Brown foreground	Esc r 3	CSI 22;33m
Blue foreground	Esc r 4	CSI 22;34m
Magenta foreground	Esc r 5	CSI 22;35m
Cyan foreground	Esc r 6	CSI 22;36m
White foreground	Esc r 7	CSI 22;37m
Grey foreground	Esc r 8	CSI 1;30m
Light red foreground	Esc r 9	CSI 1;31m

Description	Sequence	Equivalent ANSI Seq.
Light green foreground	Esc r A	CSI 1;32m
Yellow foreground	Esc r B	CSI 1;33m
Light blue foreground	Esc r C	CSI 1;34m
Light magenta foreground	Esc r D	CSI 1;35m
Light cyan foreground	Esc r E	CSI 1;36m
Bright white foreground	Esc r F	CSI 1;37m
Black background	Esc s 0	CSI 40m
Red background	Esc s 1	CSI 41m
Green background	Esc s 2	CSI 42m
Brown background	Esc s 3	CSI 43m
Blue background	Esc s 4	CSI 44m
Magenta background	Esc s 5	CSI 45m
Cyan background	Esc s 6	CSI 46m
White background	Esc s 7	CSI 47m
Cursor to line L and column C	Esc ũ L C	CSI L+33;C+33
Reverse video	Esc é	CSI 7m
Reverse video off	Esc â	CSI 27m
Blinking	Esc ä	CSI 5m
Bold off	Esc à	CSI 22m
Blinking off	Esc á	CSI 25m
Bold	Esc ç	CSI 1m
Set foreground colour to x and background colour to y	Esc ê x y	CSI 3x;4ym
x and y available values:		
0: black	1: red	2: green
3: brown	4: blue	5: magenta
6: cyan	7: white	
Delete current line	Esc ë	CSI M
Insert a line of null characters	Esc è	CSI L
Enable message line (25 th line)	Esc ï	CSI <1E
Enable main screen (24 lines)	Esc î	CSI <0E
Delete a character	Esc ì	CSI P
Insert a null character	Esc Ä	CSI @
Erase line from cursor to end of line	Esc Å	CSI K
Erase display from cursor to end of screen	Esc É	CSI J

2.2 - VT FAMILY

Note: this family is composed by the VT220, HFT and VT AS400 emulations.

Controlling the Cursor

Cursor right Pn columns	CSI Pn C
Cursor left	08h
Cursor left Pn columns	CSI Pn D
Cursor up	Esc M
Cursor up Pn lines	CSI Pn A
Cursor down	Esc D (or 0Ah)
Cursor down Pn lines	CSI Pn B
Cursor down Pn lines and to column 1	Esc E
Carriage return (and line feed according to the AX3000 set-up)	0Dh
Cursor to line Pn1 (1..25) column Pn2 (1..132)	CSI Pn1;Pn2 H (or CSI Pn1;Pn2 f)

Editing

Set tab stop at cursor position	Esc H
Move cursor to next tab stop	09h
Clear tab stop at cursor position	CSI 0g
Clear all tab stops	CSI 3g
Insert Pn null characters beginning at cursor position	CSI Pn @
Insert Pn lines of null characters beginning at cursor line	CSI Pn L
Delete Pn characters beginning at cursor position	CSI Pn P
Delete Pn lines beginning at cursor line	CSI Pn M
Erase display:	
from cursor to end of screen	CSI 0 J
from beginning of screen to cursor	CSI 1 J
entire screen	CSI 2 J
Erase line:	
from cursor to end of line	CSI 0 K
from start of line to cursor	CSI 1 K
entire line	CSI 2 K
Erase Pn characters beginning at cursor column	CSI Pn X

Character Sets

Assign Ps character set as G0		Esc (Ps
Assign Ps character set as G1		Esc) Ps
Assign Ps character set as G2		Esc * Ps
Assign Ps character set as G3		Esc + Ps
Ps = B (ASCII)	Ps = R (French)	Ps = < (DEC multinational)
Ps = K (German)	Ps = Y (Italian)	Ps = 0 (DEC special graphics)
Ps = Z (Spanish)	Ps = = (Swiss)	Ps = %6 (Portuguese)
Map G0 to GL		0Fh
Map G1 to GL		0Eh
Map G2 to GL		Esc n
Map G3 to GL		Esc o
Map G1 to GR		Esc ~
Map G2 to GR		Esc }
Map G3 to GR		Esc
Temporarily map the G2 character set to GL, for the next character		Esc N
Temporarily map the G3 character set to GL, for the next character		Esc O

Controlling Character Attributes

Definition	CSI Ps;...Ps m
Ps = 0: normal	
Ps = 1: dim	
Ps = 4: underline (only monochrome VGA monitors)	
Ps = 5: blinking	
Ps = 7: reverse video	
Ps = 8: blank	
Ps = 22: normal	
Ps = 24: blinking off	
Ps = 25: underline off	
Ps = 27: reverse video off	
Ps = 3x: set foreground colour to colour x (x from 0 to 7)	
0: black 1: red 2: green 3: brown	
4: blue 5: magenta 6: cyan 7: white	
Ps = 4x: set background colour to colour x (x from 0 to 7)	
0: black 1: red 2: green 3: brown	
4: blue 5: magenta 6: cyan 7: white	

Controlling the Terminal

Sound bell	07h
Terminal mode on	CSI Ps;...Ps h
Ps = 2: lock keyboard	
Ps = 4: insert character mode	
Ps = 20: new line mode (LF=CR+LF)	
Ps = 54: ASCII mode	
Ps = ?1: cursor keys mode: application	
Ps = ?3: set 132-column display	
Ps = ?4: smooth scroll	
Ps = ?5: Light background (paper white)	
Ps = ?6: origin is scrolling region	
Ps = ?7: autowrap mode on	
Ps = ?8: autorepeat mode on	
Ps = ?12: turn the CAPS LED on	
Ps = ?18: print Form Feed (0Ch) mode on	
Ps = ?19: printer extent mode: screen	
Ps = ?25: enable cursor	
Ps = ?42: national mode	
Terminal mode off	CSI Ps;...Ps l*
Ps = 2: unlock keyboard	
Ps = 4: replace character mode	
Ps = 20: line feed mode	
Ps = 54: PC-scancode mode	
Ps = ?1: cursor keys mode: cursor	
Ps = ?2: entering VT52 Mode	
Ps = ?3: set 80-columns display	
Ps = ?4: jump scroll	
Ps = ?5: normal background	
Ps = ?6: origin is screen	
Ps = ?7: autowrap mode off	
Ps = ?8: autorepeat mode off	
Ps = ?12: turn the CAPS LED off	
Ps = ?18: print Form Feed (0Ch) mode off	
Ps = ?19: printer extent mode: region	
Ps = ?25: disable cursor	
Ps = ?42: multinational mode	

* The last character in this sequence is a lowercase L

Define scrolling region (beginning line number, ending line number)	CSI Pn1;Pn2 r
Display 24 data lines + 1 message line	CSI < 0 I *
Display 25 data lines	CSI < 1 I
Enable main screen (24 lines)	CSI < 0 E
Enable message line (25 th . line)	CSI < 1 E
Keypad application mode	Esc =
Keypad numeric mode	Esc >
Double-width, double-height line (top half)	Esc # 3
Double-width, double-height line (bottom half)	Esc # 4
Single-width, single-height line	Esc # 5
Double-width, single-height line	Esc # 6
Enable view number Pn	CSI Pn z
Enable view number 1	CSI U
Enable view number 2	CSI V
Save current cursor position	Esc 7
Restore cursor to saved position	Esc 8
PC-scancode mode	CSI < 0 A
ASCII mode	CSI < 1 A
Disable colouring feature	CSI < 0 G
Enable colouring feature	CSI < 1 G
Set colours and enable colouring mode (4 pairs)	CSI < 2;Cn1;...;Cn8 G
Set a VGA palette colour	CSI < 3;Cn;Pn G
Change page (only if '4 views, 2 pages' is selected through the set-up)	CSI < Ps1;Ps2 L
Ps1 = 0: regular page changing	Ps2 = 0: enable next page
Ps1 = 1: copy current page to wanted page before swap	Ps2 = 1: enable page number 1
Ps1 = 2: clear wanted page before swap	Ps2 = 2: enable page number 2
Turn keyboard LEDs on or off	CSI < Pn1;Pn2;Pn3 O
Pn1 is the state of NUM LED, Pn2 is the state of CAPS LED and Pn3 is the state of SCROLL LED.	
The Pn parameter values should be:	
Pn = 0: the state of the LED is not modified	Pn = 1: turn the LED on
Pn = 1: turn the LED on	
Mouse feature (if set through the set-up)	CSI < Pn M **
Pn = 0: disable mouse	Pn = 1: local mode
Pn = 2: raw mode	
Axel bitmap graphics functions	CSI < Ps;...Ps K ***

* The last character in this sequence and in the next sequence is an uppercase i

** For more information, refer the concerned literature

*** For more information, refer the concerned literature

Printing Control Sequences

Select the default printer port: CSI < Po F
 TCP/IP models: Po = 1: AUX1 Po = 2: AUX2 Po = 3: parallel
 Serial models: Po = 1: AUX1 Po = 2: parallel

Using default port (serial or parallel): CSI Pn i
 Pn = 0: print screen Pn = 5: Enable local printing mode Pn = 4: Disable local printing mode

Enable Po auxiliary port for sending only (disable: CSI 4i) CSI < 5; Po C
 Enable receive mode of Po auxiliary port (only AUX1) CSI < 5; Po D
 Disable receive mode of Po auxiliary port (only AUX1) CSI < 4; Po D

TCP/IP models: Po = 0: default port Po = 1: AUX1 Po = 2: AUX2 Po = 3: parallel
 Serial models: Po = 0: default port Po = 1: AUX1 Po = 2: parallel

Print cursor line when 0Ah is received CSI ? 1 i
 Auto print mode on CSI ? 5 i
 Auto print mode off CSI ? 4 i

Protected Characters

Next written characters are protected CSI 1 " q
 Next written characters are unprotected CSI 2 " q (or CSI 0 " q)

Erase only unprotected characters in display:
 from cursor to end of screen CSI ? 0 J
 from beginning of screen to cursor CSI ? 1 J
 entire screen CSI ? 2 J

Erase only unprotected characters in line:
 from cursor to end of line CSI ? 0 K
 from start of line to cursor CSI ? 1 K
 entire line CSI ? 2 K

Programming Function Keys

VT220 mode: Esc P Ps1 ; Ps2 | Keyn / Stn { ; Keyn / Stn } Esc \

Ps1=0: clear all keys before loading new values (default value)

Ps1=1: clear one key at a time, before loading a new value

Ps2=0: lock the keys (default value)

Ps2=1: do not lock the keys

Keyn: the key selector number indicates which key you are defining

17: <Shift><F6>	23: <Shift><F11>	29: <Alt><Shift><F8>
18: <Shift><F7>	24: <Shift><F12>	31: <Alt><Shift><F9>
19: <Shift><F8>	25: <Alt><Shift><F5>	32: <Alt><Shift><F10>
20: <Shift><F9>	26: <Alt><Shift><F6>	33: <Alt><Shift><F11>
21: <Shift><F10>	28: <Alt><Shift><F7>	34: <Alt><Shift><F12>

Stn: the string parameter is the key definition, encoded as pairs of hexadecimal codes.

Example: LOG <RC> is coded by 4C4F470D

AXEL mode: CSI < Code P Terminator Message Terminator

- Code: function key (refer to appendix A.3 or see the AX3000 set-up)
- Terminator: one character (>20h)
- Message: key definition (any character except Terminator). Character '^' (5Eh) indicates 20h must be subtracted from the next character.

Example: **CSI < 1 P amenu^a, <F1>** sends **menu <RC>**

Resetting the Terminal

Hard terminal reset

Esc c

Soft terminal reset

CSI 0 ! p

Select an operating level

CSI Ps1;Ps2 " p

Ps1 = 61: level 1 (VT100)

Ps2 = 0: 8-bit controls (level 2 only)

Ps1 = 62: level 2 (VT220)

Ps2 = 1: 7-bit controls

Ps2 = 2: 8-bit controls (level 2 only)

Reports

AX3000 IP address	CSI < a (or CSI < 0 a)	
Response: IP address <CR>		
Firmware revision	CSI < 1 a	
Response: version <CR>

Bidirectional mode on	Esc d %

Programmable keys

WYSE Mode:

Program:

1) Syntax: Esc z key sequence 7Fh

Key: key number

Function keys:

<F1> to <F12>: 40h to 4Bh

<Shift><F1> to <Shift><F12>: 60h to 6Bh

Arrows keypad:

up: 2Bh down: 2Ch left: 2Dh right: 2Eh

Editing keypad:

Insert: 70h Home: 2Ah PageUp: 77h

Delete: 23h End: 5Ch PageDn: 72h

Other keys:

Esc: 20h Backspace: 22h

Sequence: up to 32 bytes to be loaded in the key.

2) Syntax: Esc Z dir key sequence 7Fh

dir: <0> = normal <1> = remote <2> = local

key et sequence: see above

Clear:

Esc z key 7Fh or Esc Z dir key 7Fh

AXEL Mode:

Syntax is: CSI < Code P Terminator Message Terminator

- Code: function key (refer to appendix A.3 or see the AX3000 set-up)
- Terminator: one character (>20h)
- Message: key definition (any character except Terminator). Character '^' (5Eh)

indicates 20h must be subtracted from the next character.

Example: **CSI < 1 P amenu^a, <F1> sends menu <RC>**

Terminal Report

AX3000 IP address	CSI < a (or CSI < 0 a)
Response: IP address <CR>	
Firmware revision	CSI < 1 a
Response: version <CR>	
Answerback message (set through the AX3000 Set-Up)	CSI < 4 a
Response: message	
Current session number	CSI < 5 a
Response: number <CR>	
Printer Status	CSI < 6 a
Response: OK <CR> or ERR <CR>	
Terminal identification	Esc 20h
Terminal returns: 6 0 <RC>	
Read Programmable key value	Esc Z ~ key
Terminal returns: dir key sequence 7Fh	
Read cursor address in current 80-column page	Esc ?
Terminal returns: line col <RC>	
Read 80-column page number and cursor address	Esc w `
Terminal returns: num line col <RC>	
Read 80-column page (or window) number and cursor address	Esc /
Terminal returns: num line col <RC>	
Read cursor address in current 80/132-column page	Esc b
Terminal returns: line R col C	
Send ACK	05h
Terminal returns (if ACK mode is on): 06h	

2.4 - PCTERM FAMILY

This family is composed by the PCTERM, PCTERM THEOS and OS2 POLYMOD2 emulation.

Note: in following terminal commands, italic and underscored parameter values are from 00h to FFh. Other parameter values are greater than 20h.

Controlling Cursor

Cursor left	08h
Cursor right	0Ch
Cursor up (no scroll)	0Bh
Cursor up ; scroll	Esc j
Cursor down (no scroll)	16h
Cursor down ; scroll	0Ah
Cursor to line 1 and column 1	1Eh
Cursor to start of line	0Dh
Cursor to start of next line	1Fh
Cursor to line Pn1 (0..24) and column Pn2 (0..79)	Esc = <u>Pn1</u> +20h <u>Pn2</u> +20h

Editing

Move cursor to next tab stop	09h
Move cursor to previous tab stop	Esc I*
Set tab stop at cursor position	Esc 1
Clear tab stop at cursor position	Esc 2
Clear all tab stops	Esc 3
Insert a space character at cursor position	Esc Q
Insert a line of space characters at cursor line	Esc E
Delete cursor character	Esc W
Delete cursor line	Esc R
Clear screen to nulls	Esc *
Clear screen to spaces	Esc +
Clear screen to write-protected spaces	Esc ,
Clear screen to character <u>car</u>	Esc F <u>car</u>

* The last character in this sequence is an uppercase i

Controlling the Terminal

Sound a bell			07h
Lock keyboard			Esc #
Unlock keyboard			Esc "
Set cursor style			Esc . Pn1
Pn1 = 0 (invisible)	Pn1 = 1 (visible)		Pn1= 2 (block)
Pn1 = 3 (underline)	Pn1 = 4 (underline)		Pn1= 5 (block)
Autowrap mode on			Esc ~
Autowrap mode off			Esc 0
Insert mode on (replace mode off)			Esc Z
Replace mode on (insert mode off)			Esc r
Monitor mode on			Esc U
Monitor mode off			Esc u (or Esc X)
Restore normal screen			Esc d
Reverse screen			Esc b
Turn screen display off			Esc O (or Esc 20h 8)
Turn screen display on			Esc N (or Esc 20h 9)
ASCII mode			Esc c (or Esc 20h q or Esc 20h r)
PC-Scancode mode			Esc H (or Esc 20h p)
Set hardware handshake (DTR)			0Eh
Set software handshake (XON/XOFF or XPC)			0Fh
Set 80-column display			Esc m
Set 132-column display			Esc n
Display 25 data lines (clear screen)			Esc ^
Display 25 data lines (no clear screen)			Esc e (or Esc h)
Display 24 data lines + 1 status line (no clear screen)			Esc g
Display computer message in status line			Esc f str 0Dh
'new line' mode on (CR=CR+LF)			Esc 8
'new line' mode off			Esc 9
Full duplex mode on			Esc }
Autoscrolling mode on			Esc 20h v (or Esc 20h @)
Autoscrolling mode off			Esc w
Set-up MAIN port (serial model only)			Esc 20h t p1 p2 p3
p1 = 0 (8-bit control)	p2 = 0 (no parity)		p3 = 0 (1 stop bit)
p1 = 1 (7-bit control)	p2 = 1 (even parity)		p3 = 1 (2 stop bit)
	p2 = 2 (odd parity)		
NUM LED on			Esc 20h J
NUM LED off			Esc 20h K

MAJ LED on	Esc 20h L
MAJ LED off	Esc 20h M
DEFIL LED on	Esc 20h N
DEFIL LED off	Esc 20h O

Printing Control Sequences

Print screen	Esc P
Transparent print mode on	Esc `
Transparent print mode off	Esc a
Non-transparent print mode on	Esc @ (12h)
Non-transparent print mode off	Esc A (14h)
Print next character	10h

Controlling Character Attributes (except OS/2 POLYMOD2)

Definition		Esc G attr
attr values	0 : Normal	p or @ : Normal + Dim
	1 : Invisible	q or A : Invisible + Dim
	2 : Blink	r or B : Blink + Dim
	3 : Invisible	s or C : Invisible + Dim
	4 : Reverse	t or D : Reverse + Dim
	5 : Invisible + Reverse	u or E : Invisible + Reverse + Dim
	6 : Reverse + Blink	v or F : Reverse + Blink + Dim
	7 : Invisible + Reverse	w or G : Invisible + Reverse + Dim
	8 : Underline	x or H : Underline + Dim

	= : Invisible + Reverse	} or M : Invisible + Reverse + Dim
	> : Underline + Blink	~ or N : Underline + Blink + Dim
	? : Invisible + Reverse	7Fh or o : Invisible + Reverse + Dim

Colour Character Attributes (only for THEOS)

Definition		Esc / c1 c2 c3 c4		
	c1: foreground normal colour	c3: foreground reverse colour		
	c2: background normal colour	c4: background reverse colour		
c1, c2, c3 et c4 values:				
	0: black	1: blue	2: green	3: cyan
	4: red	5: magenta	6: yellow	7: white

Character Attributes (only for OS/2 POLYMOD2)

Definition Esc G attr
 The format of attr is the format of the standard VGA character attribute

Write-Protected Characters (only THEOS)

A write-protected character is written with the dim attribute (cf. character attributes)

Protect mode on	Esc &
Protect mode off	Esc '
Characters are written only in the protected regions	Esc (
Characters are written everywhere	Esc)
Clear unprotected:	
screen to spaces	Esc ; or 1Ah
screen to nulls	Esc :
line to spaces from cursor	Esc T
line to nulls from cursor	Esc t
screen to spaces from cursor	Esc Y
screen to nulls from cursor	Esc y

Programming Function Keys

Syntax is: Esc z Keyn message 7Fh

Keyn	:	key selector	
@	:	<F1>	` : <Shift><F1>
A	:	<F2>	a : <Shift><F2>
...	:
K	:	<F12>	k : <Shift><F12>

message : definition string (length max. 32, any character except 7Fh).

2.5 - SM94XX FAMILY

This family is composed by the SM9400 and SM9412 emulations.

These emulations are dedicated to a legacy operating system especially used in France. So, the description of terminal commands are only given in the French manual.

2.6 - PROLOGUE FAMILY

This family is composed by the PROLOGUE 2/3, PROLOGUE 4/5 and TWIN SERVER emulations.

These emulations are dedicated to a legacy operating system especially used in France. So, the description of terminal commands are only given in the French manual.

2.7 - QVT119+ EMULATION

Cursor Commands

Cursor left	08h
Cursor right	0Ch
Cursor up; no scroll	0Bh
Cursor up; scroll	Esc J
Cursor down; scroll	0Ah
Cursor to start of next line	1Fh
cursor to start of line	0Dh
Home cursor	1Eh
Address cursor in current 80-column page	Esc = <i>line col</i>
Address cursor in current 80-column or 132-column page	Esc = <i>line n col</i>
Address cursor in a specific 80-column page	Esc - <i>page line col</i>
Address cursor line (current line not modified)	Esc : <i>line</i> or Esc [<i>line</i>
Address cursor column (current column not modified)	Esc] <i>line</i>
Address cursor in current 80/132-column page	Esc ^ <i>lll R ccc C</i>

Editing

Set tab stop	Esc 1
Clear tab stop	Esc 2
Clear all tab stops	Esc 3
Tabulate cursor	09h
Backtab	Esc I *
Insert space character	Esc Q
Insert line of spaces	Esc E
Delete cursor character	Esc W
Delete cursor line	Esc R
Clear page to nulls	Esc *0
Clear page to spaces	Esc *1 or Esc +
Clear screen	1Ah

* The last character in this sequence is an uppercase i

Video Attributes

Assign character display attribute Esc G attr

attr values for full-intensity:

0	: normal	8	: underscore
1	: invisible	9	: underscore + invisible

Cursor Commands

Cursor left	08h
Cursor right	0Ch
Cursor up; no scroll	0Bh
Cursor up; scroll	Esc j
Cursor down; scroll	0Ah
Cursor down; no scroll	16h
Cursor to start of next line	1Fh
cursor to start of line	0Dh
Home cursor	1Eh
Address cursor in current 80-column page	Esc = <i>line col</i>
Address cursor in a specific 80-column page or window	Esc - <i>page line col</i>

Editing

Set tab stop	Esc 1
Clear tab stop	Esc 2
Clear all tab stops	Esc 3
Tabulate cursor	Esc i or 09h
Backtab	Esc I *
Insert line of spaces	Esc E
Delete cursor line	Esc R
Clear page to nulls	Esc *
Clear page to spaces	Esc +

Controlling the terminal

Sound bell	07h
Lock keyboard	Esc #
Unlock keyboard	Esc "
Monitor mode on	Esc U
Monitor mode off	Esc u or Esc X
Graphics mode on	Esc \$
Graphics mode off	Esc %
Character mode on (block mode off)	Esc C
Full-duplex mode on	Esc DF
Half-duplex mode on	Esc DH

* The last character in this sequence is an uppercase i

Display previous page	Esc K
Display next page	Esc J
Turn normal screen on	Esc d
Turn reverse screen on	Esc b
Insert mode on (replace mode off)	Esc q
Replace mode on (insert mode off)	Esc r
Local edit mode on (duplex off)	Esc k
Duplex edit mode on (local off)	Esc l*
Turn screen display off	Esc o
Turn screen display on	Esc n
Set scrolling type	Esc ` <i>scroll</i>
Cursor off	Esc . 0
Set cursor type	Esc . <i>curs</i>
curs = '1' or '2': blinking block	curs = '3' or '4': blinking line
Key repeat off	Esc e-
Key repeat on	Esc e,
Receive CR mode off	Esc e 4
Receive CR mode on	Esc e 5

Video Attributes

Assign character display attribute Esc G attr

attr values for full-intensity:

0 : normal	8 : underscore
1 : invisible	9 : underscore + invisible
2 : blink	: : underscore + blink
3 : invisible + blink	; : underscore + blink + invisible
4 : reverse	< : underscore + reverse
5 : reverse + invisible	= : underscore + reverse + invisible
6 : reverse + blink	> : underscore + reverse + blink
7 : reverse + blink + invisible	? : underscore + reverse + invisible + blink

Note: the video attribute is encoded by a character on the screen

Message Line

Program label line	Esc f <i>txt</i> 0Dh
Display label line	Esc g
Clear label line	Esc h

* The last character in this sequence is a lowercase L

Protected Data

Protect mode on	Esc &
Protect mode off	Esc '
Write-protect mode off	Esc (
Write-protect mode on	Esc)
Clear cursor column from cursor	Esc V
Clear unprotected ...:	
page to spaces	Esc ; or 1Ah or Esc ,
page to nulls	Esc :
line to spaces from cursor	Esc T
line to nulls from cursor	Esc t
page to spaces from cursor	Esc Y
page to nulls from cursor	Esc y

Sending Data

Print formatted page	Esc P
Print unformatted page	L
Transparent print mode on	Esc '
Transparent print mode off	Esc a
Secondary receive mode off	12h
Secondary receive mode on	14h
COPY mode on	Esc @
COPY mode off	Esc A

Programmable keys

Program (from WYSE emulation)	Esc z <i>key sequence</i> 7Fh
-------------------------------	-------------------------------

Terminal Report

Answerback message (set through the AX3000 Set-Up)	Esc M
Response: message (or 60 <CR> if message is null)	
Read cursor address in current 80-column page	Esc ?
Terminal returns: line col <RC>	
Read 80-column page (or window) number and cursor address	Esc /
Terminal returns: num line col <RC>	
Send ACK	05h
Terminal returns: 06h	

2.9 - 3151 EMULATION

Cursor Commands

Cursor right	Esc C
Cursor left	Esc D
Cursor up (no scroll)	Esc A
Cursor up (scroll)	Esc ! M
Cursor down (no scroll)	Esc B
Cursor down (scroll)	Esc 20 M
Cursor to start of next line	Esc M
Cursor to next line (same column)	0Ah
Cursor to start of line	0Dh
Home cursor	Esc H
Set cursor address: line Pn1 (20h...38h), column Pn2 (20h...6Fh)	Esc Y Pn1 Pn2
Set cursor address: line Pn1 (1..25), column Pn2 (1..80)	Esc [Pn1 ; Pn2 H
Set buffer address line Pn1 (20h...38h), column Pn2 (20h..6Fh)	Esc X Pn1 Pn2
Reset buffer address mode	Esc 20h Z
Insert cursor	Esc Z

Editing

Set tab stop	Esc 0
Tabulate cursor	09h
Backtab	Esc 2
Clear tab stop	Esc 1
Clear all tab stops	Esc 20h 1
Clear screen and home cursor	Esc L or Esc K or Esc ! L
Clear screen from cursor	Esc J
Clear line from cursor	Esc I
Insert a line	Esc N
Delete cursor line	Esc O
Insert character Pn	Esc P Pn
Delete cursor character	Esc Q

Terminal Commands

Reset to initial state	Esc 20h S
Sound bell	07h
Lock keyboard	Esc :
Unlock keyboard	Esc ;
Assign Pn character set as G0	Esc < Pn
Assign Pn character set as G1	Esc > Pn
Set a 24x80 screen	Esc 20h r!! 20h 8"P
Set a 25x80 screen	Esc 20h r!! 20h 9"P
Set a 24x132 screen	Esc 20h r!! 20h 8\$D
Set a 25x132 screen	Esc 20h r!! 20h 9\$D
Enable 'Impr' key (hardcopy sequence is sent when the key is pressed)	Esc) :
Disable 'Impr' key (the hardcopy is locally performed)	Esc) ;

Programmable Keys

Set all default programmable keys	Esc 20h t
-----------------------------------	-----------

Printing Control Sequences

Enable local printing mode	10h 14h
Disable local printing mode	10h 12h
Print the screen (hardcopy)	Esc W or Esc 20h W
Select the default printer port:	CSI < Po F
TCP/IP models: Po = 1: AUX1 Po = 2: AUX2 Po = 3: parallel	
Serial models: Po = 1: AUX1 Po = 2: parallel	

Video Attributes

Assign character display attribute (additive sequence)	Esc 4 <i>attr</i> a
--	---------------------

attr values:

	(: bold
!	:	reverse
)	:	bold + reverse
"	:	underscore
*	:	bold + underscore
#	:	underscore + reverse
+	:	bold + underscore + reverse
\$:	blink
,	:	bold + blink
%	:	reverse + blink
-	:	bold + reverse + blink
&	:	underscore + blink
.	:	bold + underscore + blink
'	:	reverse + underscore + blink
/	:	bold + reverse + underscore + blink
0	:	invisible

Assign character display attribute (non-additive sequence)	Esc 4 <i>attr</i>
--	-------------------

attr values:

@ : normal (no attribute)	H : bold
A : reverse	I : bold + reverse
B : underscore	J : bold + underscore
C : underscore + reverse	K : bold + underscore + reverse
D : blink	L : bold + blink
E : reverse + blink	M : bold + reverse + blink
F : underscore + blink	N : bold + underscore + blink
G : reverse + underscore + blink	O : bold + reverse + underscore + blink
P : invisible	

Reset character display attribute

Esc 4 *attr* b

attr values:

0 : bold + reverse + underscore + blink	8 : reverse + underscore + blink
1 : bold + underscore + blink	9 : underscore + blink
2 : bold + reverse + blink	: : reverse + blink
3 : bold + blink	; : blink
4 : bold + underscore + reverse	< : underscore + reverse
5 : bold + underscore	= : underscore
6 : bold + reverse	> : reverse
7 : bold	20h : invisible

Terminal Report (Axel)

CHARACTER SETS

This chapter deals with available AX3000 character sets.

The Platine terminal supports many character sets. These character sets are sorted by families:

- ANSI, PCTERM, SM94xx, PROLOGUE, QVT, TVI and 3151 families
- VT family
- WYSE family

Convention: in following character sets, for each character, the decimal, hexadecimal and octal values are given:

character	A	41 65 101	hexadecimal value decimal value octal value
-----------	---	-----------------	---

3.1 - ANSI, PCTERM, SM94XX, PROLOGUE, QVT, TVI, 3151

The following table specifies available character sets for each family:

	ANSI	PCTERM	SM94xx	PROLOGUE	QVT	TVI	3151
PC 437	✓	✓		✓	✓	✓	✓

National ISO 7-Bit:

Many characters of the National ISO 7-Bit set are dependent of the national keyboard selected through the AX3000 Set-Up. The following table describes the character set associated with the US keyboard:

	0	1	2	3	4	5	6	7
0	NUL 00	DLE 10	SP 20	0 30	@ 40	P 50	` 60	p 70

3.2 - VT FAMILY

The VT220 emulation allows a 8-bit character set (256 characters) to be built from two 7-bit character sets (128 characters).

These 7-bit character sets are composed of 32 non-display control characters (called C0 and C1) and 94 display characters (called GL and GR).

A 8-bit character set is composed of:

- C0: control characters (ASCII codes from 00h to 1Fh),
- GL: graphic left (ASCII codes from 20h to 7Fh),
- C1: control characters (ASCII codes from 80h to 9Fh),
- GR: graphic right (ASCII codes from A0h to FFh).

The Platine terminal provides nine 7-bit character sets (described in the following pages):

- ASCII,
- 6 national replacement character sets (NRCs),
- DEC Multinational,
- DEC Special Graphic.

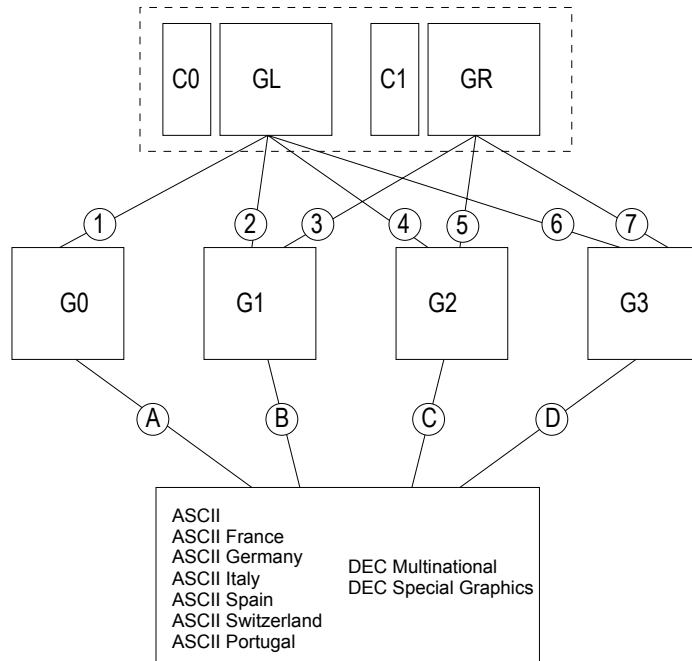

To use character sets, the following operations are performed:

- Map 4 character sets to the 4 available tables (G0, G1, G2 and G3).
- Map two tables (G0, G1, G2 or G3) to GL and GR.

When the AX3000 is switched on, the GL, GR, G0, G1, G2 and G3 tables are initialised according to the character set selected through the AX3000 Set-Up:

- **DEC Multinational:** GL and G0: ASCII set,
GR, G1, G2 and G3: DEC Multinational set.
- **National ISO 7-BIT:** GL and G0: NRCs (according to the selected keyboard)
GR, G1, G2 and G3: unknown

The following diagram shows the mechanisms for designating and mapping character sets:

The following escape sequences are used to designate and map character sets (where x represents the character set code):

- | | |
|---------------------|-------------------|
| (A): Esc (x | (1): 0Fh |
| (B): Esc) x | (2): 0Eh |
| (C): Esc * x | (3): Esc ~ |
| (D): Esc + x | (4): Esc n |
| | (5): Esc } |
| | (6): Esc o |
| | (7): Esc |

x values: Ps = B (ASCII) Ps = R (French) Ps = < (DEC multinational)
 Ps = K (German) Ps = Y (Italian) Ps = 0 (DEC special graphics)
 Ps = Z (Spanish) Ps = = (Swiss) Ps = %6 (Portuguese)

The following describes the 9 available character sets (these sets can be mapped either to GL or GR):

3.3 - WYSE FAMILY

The WYSE emulation allows a 8-bit character set (256 characters) to be built from two 7-bit character sets (128 characters). A 8-bit character set is composed of:

- a primary set (ASCII codes from 00h to 7Fh),
- a secondary set (ASCII codes from 80h to FFh),

The AX3000 provides seven 7-bit character sets (described in the following pages):

- Native Mode, - PC Equivalent - Graphics 1
- Multinational - Graphics 2 - Graphics 3
- Standard ASCII

To use character sets, the following operations are performed:

- Map 4 character sets to the 4 available banks (0 to 3).
- Map two banks to the primary and the secondary sets.

When the AX3000 is switched on, the primary and the secondary sets are initialised according to the character set selected through the Terminal Set-Up:

- **WYSE 60**: primary set = native mode, secondary set = multinational.
- **National ISO 7-BIT**: primary set = native mode.

The following diagram shows the mechanisms for designating and mapping character sets:

Native Mode

- 4 -
KEYBOARDS

This chapters provides a description of available national keyboards, a list of the default values for programming keys corresponding to the selected emulation and information about dead keys.

4.1 - NATIONAL KEYBOARDS

When a terminal is used in ASCII Mode, a national keyboard must be selected.

The AX3000 Platine terminal provides the following national keyboards:

- USA
- United Kingdom
- France
- Germany
- Spain
- Switzerland (German)
- Switzerland (French)
- Belgium
- Italy
- Portugal
- Netherlands

These 11 national keyboard layouts are described in the following.

U.S.A.

U.K.

FRANCE

GERMANY

SPAIN

SWITZERLAND (German)

SWITZERLAND (French)

BELGIUM

ITALY

PORTUGAL

DUTCH

4.2 - PROGRAMMING KEYS

AX3000's built-in **Predefined Configuration** set-ups automatically set all standard terminal parameters to match the selected operating system.

Automatic configuration sets both the 'standard' terminal parameters (emulation, number of lines, screen modes, etc) and also the values of the available programming function keys.

Up to 62 programming keys (48 function keys plus the numeric keypad and escape) are updated in this way.

Function Key Memory Usage

Follow these two rules:

- do not exceed 32 characters, maximum, per function key string.
- Serial model: do not exceed 255 characters, in total, to encode all the function key strings.
- TCP/IP model: do not exceed 255 characters, per session, to encode all the function key strings. Sometimes, when you exit set-up, the Platine terminal will sound 5 'beeps'. This indicates insufficient memory for all the function key definitions.

Serial AX3000 Multi-Session

The ANSI, VT and WYSE families offer the multi-session capability (through the axmscreen software). Twelve dedicated keystrokes are needed for the multi-session.

Notes:

- the multi-session keystrokes can be changed through the AX3000 Set-Up.
- when a keystroke is redefined through the AX3000 Set-Up and also used by the multi-session, the multi-session feature has priority.

The following table gives the 12 multi-session default keystrokes and the associated values (these values can not be changed):

label	Value	ANSI	VT, WYSE
session 1	Esc [<a	Alt+F1	Ctrl+F1
session 2	Esc [<b	Alt+F2	Ctrl+F2
session 3	Esc [<c	Alt+F3	Ctrl+F3
session 4	Esc [<d	Alt+F4	Ctrl+F4
session 5	Esc [<e	Alt+F5	Ctrl+F5
session 6	Esc [<f	Alt+F6	Ctrl+F6
session 7	Esc [<g	Alt+F7	Ctrl+F7
session 8	Esc [<h	Alt+F8	Ctrl+F8
who	Esc [<i	Alt+F9	Ctrl+F9
help	Esc [<j	Alt+F10	Ctrl+F10
quit	Esc [<k	Alt+F11	Ctrl+F11
exit	Esc [<l	Alt+F12	Ctrl+F12

TCP/IP AX3000 Multi-Session

No additional software is needed for the TCP/IP AX3000 multi-session. The default multi-session keystrokes are <Alt><Fx> (Fx represents whichever of the F1 to F12).

Notes:

- the multi-session keystrokes can be changed through the AX3000 Set-Up.
- when a keystroke is redefined through the AX3000 Set-Up and also used by the multi-session, the multi-session feature has priority.

Convention

in the following tables, the '**N**' column is the function key number (AX3000's set-up), the '**Keystroke**' column is the associated keystroke and the '**Value**' column is the corresponding default value.

4.2.1 - ANSI Family

ANSI, ANSI DOS, UNIX SCO 3.2.2, UNIX SCO 3.2.4, SCO OPENSERVEN and XENIX SCO

F21	Shift+F9	Esc [021q
F22	Shift+F10	Esc [022q
F23	Shift+F11	Esc [023q
F24	Shift+F12	Esc [024q
F62	Esc	1Bh

The following table lists the default value of the numeric keypad (or editing keypad and cursor keypad):

N°	PS2 Keyboard	Value	3270 Keyboard
F49	<Home>	Esc [H	home
F50	<Up>	Esc [A	up
F51	<Page Up>	Esc [150q	PA1
F53	<Left>	Esc [D	left
F55	<Right>	Esc [C	right
F57	<End>	Esc [146q	spaceof
F58	<Down>	Esc [B	down
F59	<PageDown>	Esc [154q	PA2
F60	<Insert>	Esc [139q	insert
F61		Esc [P	delete

The following keystrokes are available in HFT emulation. It is not possible to modify their values:

PS2 Keyboard	Value	3270 Keyboard
<Ctrl right>	Esc [114q	Send
<Scroll Lock>	Esc [213q	Repls
<Pause>	Esc [217q	Clear screen
<Print Screen>	Esc [209q	Print screen
<Alt><Print Screen>	Esc [212q	System request
<Shift><Scroll Lock>	Esc [214q	Saves
<Shift><Tab>	Esc [Z	Backtab
<Shift><Up>	Esc [161q	uup
<Shift><Down>	Esc [164q	ddown
<Shift><right>	Esc [167q	rright
<Shift><left>	Esc [158q	lleft
<Ctrl><Print Screen>	Esc [211q	Attention
<Ctrl><left>	Esc [159q	PA3

VT AS400

Function keys:

N°	Keystroke	Value
F1	F1	Esc 1
F2	F2	Esc 2
F3	F3	Esc 3
F4	F4	Esc 4
F5	F5	Esc 5
F6	F6	Esc 6
F7	F7	Esc 7
F8	F8	Esc 8
F9	F9	Esc 9
F10	F10	Esc 0
F11	F11	Esc -
F12	F12	Esc =
F13	Shift+F1	Esc !
F14	Shift+F2	Esc @
F15	Shift+F3	Esc #
F16	Shift+F4	Esc \$
F17	Shift+F5	Esc %
F18	Shift+F6	Esc ^
F19	Shift+F7	Esc &
F20	Shift+F8	Esc *
F21	Shift+F9	Esc (
F22	Shift+F10	Esc)
F23	Shift+F11	Esc
F24	Shift+F12	Esc +
F62	<Esc>	1Bh

The keypad modes (numeric or application) and the cursor keypad modes (cursor or application) are selected through escape sequences.

Numeric keypad:

N°	Key	Keypad Mode	
		Locked	Unlocked
---	<*>	*	*
F52	<->	-	-
F61	<.>	.	7Fh
F60	<0>	0	Esc q
F57	<1>	1	Esc [5~
F58	<2>	2	Esc [B
F59	<3>	3	Esc [U
F53	<4>	4	Esc [D
F54	<5>	5	5
F55	<6>	6	Esc [C
F49	<7>	7	Esc [2~
F50	<8>	8	Esc [A
F51	<9>	9	Esc [V
---	<Return>	CR or CR+LF	CR or CR+LF
F56	<+>	+	+
---	</>	/	/

Cursor keypad:

Key	Cursor Mode
<Up>	Esc [A
<Down>	Esc [B
<Right>	Esc [C
<Left>	Esc [D

Editing keypad:

Key	Value
<Ins>	Esc I
<Home>	Ctrl O
<PgUp>	Ctrl U
	7Fh
<End>	---
<PgDn>	Ctrl F

The following keystrokes are available in VT AS400 emulation. It is not possible to modify their values:

Keystroke	Value	Label
<Print Screen>	Esc P	Print
<Tab>	09h	Field Avance
<Ctrl left>	Esc R	Error Reset
<Shift><F1>	Esc H	Help
<Shift><Return>	Esc 0Ah	New line
<Shift><Tab>	Esc 09h	Field Backspace
<Alt><Pause>	Esc A	Attention
<Alt><Print Screen>	Esc S	System request
<Alt><+> (numeric keypad)	Esc D	Duplicate
<Alt><-> (numeric keypad)	Esc M	Field Minus
<Alt><Home> (cursor keypad)	Ctrl E	Erase input
<Alt><Suppr> (cursor keypad)	Esc X	Field Exit
<Alt><Space>	Esc C	Clear screen
<Alt><Esc>	Ctrl T	Test Request
<Alt><Tab>	Esc T	Toggle indicators lights
<Alt><Return>	Esc L	Redraw screen

4.3 - COMPOSITE CHARACTERS

To enter a composite character, two keystrokes are needed. The first one is the modifier (^, ~, ¨, etc), the second one is the character itself (a, e, i, n, etc).

Example: press '^' then 'e' to get 'ê'.

Note: on the AX3000, composite characters are accented characters.

When the keyboard is in scancode mode, composite characters are handled by the operating system.

When the keyboard is in ASCII mode, composite characters can be handled either by the AX3000 or by the operating system. Select either method using the 'Compose Characters' set-up parameter.

Three values are available for this set-up parameter:

- `no`: standard processing, to get accented characters, the operating system must map the keystroke pair to a single value,
- `local`: composite characters are locally processed by the AX3000,
- `remote`: special ASCII codes are associated with modifiers.

These three modes of processing are described in the following section. However note that the National ISO 7-bit character set is not covered, as it does not support composite characters.

4.3.1 - Standard Processing

When this method is used (Compose Characters: no), the AX3000 does not perform any special processing on the composite character modifier. The following table lists the ASCII codes, sent to the operating system, for the various character sets:

	Character Sets					
	PC-437	PC-85x	PC-860	8859	DEC	SM9400
Acute accent (´)	27h	EFh	27h	B4h	27h	27h
Grave accent (`)	60h	60h	60h	60h	60h	60h
Circumflex accent (^)	5Eh	5Eh	5Eh	5Eh	5Eh	5Eh
Dieresis (¨)	22h	F9h	22h	A8h	22h	CEh
Tilde (~)	7Eh	7Eh	7Eh	7Eh	7Eh	7Eh
Paragraph (§)	15h	F5h	15h	A7h	A7h	C9h
Cube (³)	---	FCh	---	B3h	B3h	---
Cedilla (,)	2Ch	F7h	2Ch	F7h	2Ch	2Ch

Note: some symbols are not included in all characters sets. In such cases the AX3000 uses an ASCII code, to get a similar symbol. For example, with the character set 437, quotes are used for dieresis.

4.3.2 - Local Processing

When a composite character modifier is pressed (see table A.1) no character is sent to the operating system. The AX3000 waits for a second key to be pressed.

If the keystroke pair represents a valid symbol for the character set used (see table A.2), the ASCII code for this symbol is sent to the operating system.

If the symbol is not valid, a beep is sounded and the modifier is cancelled.

- Notes:**
- when the spacebar is pressed after the modifier, or when the modifier is pressed twice, the ASCII code sent to the operating system is the modifier itself (example: ^ + ^ = ^).
 - Some national keyboards (American, Italian and U.K.) do not support this feature.

	FR	GE	SP	BE	SW	PO	DU
Acute accent (´)		✓	✓	✓	✓	✓	✓
Grave accent (`)		✓	✓	✓	✓	✓	✓
Circumflex accent (^)	✓		✓	✓	✓	✓	✓
Dieresis (¨)	✓		✓	✓	✓	✓	✓
Tilde (~)				✓	✓	✓	✓
Cedilla (,)							✓

Table A.1: valid modifiers for various national keyboards

Cedilla (,)	ç Ç	ç Ç	ç Ç	ç Ç	ç Ç	ç Ç

Table A.2: valid symbols for the various modifiers and character sets

4.3.3 - Remote Processing

For this method, the operating system requires special ASCII codes to act as the modifiers of composite characters.

Note: as the paragraph symbol (§) and the cube symbol (³) are missing from some character sets, these two symbols also require special ASCII codes.

The tables on the next page list the ASCII codes required for the various national keyboards and character sets.

France	Character Set
