

Burroughs L3000

Window Accounting Computer

General Description

The L 3000 Window Accounting Computer is a general purpose unit with self-contained memory and logic.

It is designed for a window or counter environment wherever business is conducted directly with a customer.

The console accommodates passbooks, ledgers, transaction tickets and/or unit set documents according to applicational needs.

Complete flexibility for transaction processing and data accumulation is provided by the internal program.

The L 3000 has the modularity for conversion to an on-line terminal computer.
