- Resource Sharing—Programs, Data, and Peripherals
- Use IBM PCs or Compatibles as Personal Mini Workstations
- Supports Printer Spooling for Two Printers
- Runs True Multiuser Applications Software

InfoShare 1.2 is a powerful resource sharing operating system designed for the Personal Mini. It allows a variety of personal computers to share the Personal Mini's disk drives and printers. InfoShare's distributed design means that users retain their own stand-alone PC capabilities. However, InfoShare's ability to conveniently and safely share data is its most important feature.

With InfoShare 1.2, the Personal Mini has true multi-user capabilities like those of a minicomputer. Its performance is optimized with sophisticated techniques such as disk caching and elevator disk seeking. It is supported by one of the largest bases of single and multiuser software available. Shared data can be protected at several levels. This permits confidential data to remain secure, and accidental data loss is nearly eliminated.

Thanks to its straightforward commands and comprehensive on-line help system, InfoShare affords greater capabilities to the user, yet retains the simplicity and friendliness that is the fundamental benefit of using personal computers.
