

InsightServer® 3.5.5

The Linux Based Mail and Messaging Server

As with previous versions, InsightServer 3.5 delivers a Linux based mail services product that provides a functional alternative to Microsoft Exchange and existing enterprise messaging servers. However, InsightServer utilizes open standards and centralized architecture that are superior to other messaging servers. This latest version of InsightServer adds additional ease of management, integrated security, and transparent user interface.

Simple Migration

Version 3.5.5 eliminates downtime and training for InsightServer migration. Bynari's new technology, InsightConnector allows Outlook users to utilize facilities across all versions of Microsoft Outlook. This functionality allows for transparent migration for the desktop user and complete compatibility with all versions of Exchange to allow phased, mixed or total migrations. In addition, companies with IMAP servers can use the InsightConnector to allow any Outlook user to have email, folders, and calendaring full-functionality. Migration tool using java is available for transparent migration of user data from Exchange to InsightServer.

Enhanced Management Tools

Enhanced console management functions add the ability to configure mail transfers via Bynari's web-based interface. An InsightServer administrator has more robust configurations options via the web console including system log access, server side filtering rules, quotas for every user, changing user id addresses without losing mail or migrating mail, and much more. Any types of network configurations like SMTP, logging filters, user management, message configurations and advance configurations are now available with the management console.

Reliable and Cost Efficient

InsightServer offers a proven platform for deploying mission critical messaging solutions at an affordable price. Spiraling costs of proprietary messaging and collaboration products from vendors such as Microsoft have caused many organizations to worry about their infrastructures. InsightServer provides significant cost savings for any organization while allowing for network stability. Customers looking for an alternative to legacy software will find Bynari, combined with Linux, on IBM eServers, a very attractive option whether it is for a single xSeries Server or for large enterprise server consolidation on an IBM zSeries. Scaling from a single processor xSeries server to the largest of the multi-processor IBM zSeries, and iSeries, Bynari offers unparalleled scalability, interoperability and flexibility. By utilizing Linux, InsightServer and appropriate hardware systems, the total cost of ownership (TCO) is significantly less than using Microsoft mail server and other comparably priced messaging products.

**The cost effective COMPATIBLE
alternative for users of
Microsoft® Outlook and Exchange**

Bynari InsightServer provides

- Multi-protocol support (including LDAP, POP3,IMAP, SMTP)
- Multi-platform support (It is supported on all IBM eServers under Linux)
- Secure Operating Environment (utilizes both open source and third party security measures including virus protection, anti-spam filtering, stripping of worms, Trojan horses, VB scripts, etc.)
- Industry leading Reliability
- Cost Effective (Immediate savings compared to the same Microsoft based solution.)
- Compatible with a wide variety of existing Mail Clients, including Microsoft Outlook.
- InsightConnector eliminates disruption or replacement of existing Outlook mail clients)
- Microsoft Exchange Server functionality while retaining full Outlook compatibility
- Supports multi-client work environment (supports many different client platforms, including Windows, Linux and UNIX based desktops and workstations)
- Support for extended character sets under the Web console
- Localization support for over 130 languages
- Distribution Lists(both server-wide mailing lists, and personal lists)
- Special Folders creates outside of Inbox level

Security

With V3.5.5, the InsightServer has integrated SSL/TLS support for all access into the server: web administrative interface, POP3/IMAP for receiving mail, SMTP for sending mail, and LDAP for directory lookups and manipulation. The InsightServer also has improved ACL controls for deletion of folders and messages. Anti-virus, anti-spamming, and filtering security software is integrated with the web console to provide the best security software on the market. Features:

- Enhanced Email Traffic Scanning
- Information Leaks Prevention
- Bulk Mail Protection
- Intelligent Update
- Warning Notifications
- Optimal Licensing System

Full Functioned Outlook

InsightServer together with InsightConnector gives you **full** Outlook functionality, and works on all versions of Outlook.

- Personal Calendaring
- Calendar Sharing
- Contact Manager
- Global Contact Lists
- Task List
- Auto Archiving
- Outlook free-form notes
- Activity Journal
- Advanced Outlook searching
- Free/Busy Information
- Preview Pane
